

# FAIRLEIGH DICKINSON UNIVERSITY

Hackensack, NJ

**PROJECT TYPE:**  
Educational - Renovation

Hollister Construction Services performed construction services for the installation of a Hyperbolic paraboloid roof in FDU's Metropolitan campus.

Designed and built to outlast a traditional roof's limited lifespan, this roof has a distinctive tent-like roof and is on one of FDU's most recognizable building on campus. Known as the George and Phyllis Rothman Center, the facility serves as the primary athletic and recreational facility on campus. Our team was responsible for removing the outdated previous roof system and installing the new roof. The 70,471sf roof was installed during a 24-week schedule and while the campus remained active.
